PRODUCT FLYER

ASPHALT & CONCRETE REPAIR

ChipFill

Thermoplastic chips for pothole repair, heated in place.

Year-round, in any weather, with a propane torch and no hot-mix plant.

ChipFill is thermoplastic in small chips: poured into the prepared hole, levelled and heated with a propane torch, so it needs no specialized equipment and no hot-mix plant.

Once heated, it conforms to the shape of the damage and bonds to the surrounding asphalt or concrete, sealing out the water that drives freeze-thaw damage. The lane reopens to traffic within minutes.

TYPE	Thermoplastic repair chips, heated in place
EQUIPMENT	A propane torch
SURFACES	Asphalt and concrete
WEATHER	Any, year-round
BACK IN SERVICE	Minutes
BEST FOR	Smaller potholes, cracks, joints

PATROL PATCHING · EMERGENCY REPAIRS · UTILITY CUTS · EDGE JOINTS

HOW IT GOES IN

Pour, heat, reopen

01

Pour

The chips are poured into the prepared hole and levelled.

02

Heat

A propane torch heats them in place, and the repair conforms to the shape of the damage.

03

Reopen

It bonds to the surrounding asphalt or concrete and seals out water. The lane reopens within minutes.

FOR LARGER POTHOLES

With AggreFill

Where the damage is too deep or wide for ChipFill alone, AggreFill, a pre-coated aggregate, fills the void and ChipFill bonds the aggregate and seals the repair flush.

WHERE IT GOES

Roads, lots and paths

Roads	Patrol patching and emergency repairs
Parking lots	Potholes and edge joints
Sidewalks and pathways	Smaller potholes and cracks
Utility cuts
