

PREFORMED THERMOPLASTICS

AirMark

Preformed thermoplastic for airfield markings.

Taxiways, aprons, hold positions and other non-runway surfaces.

Glass beads are embedded through the full cross-section of the material, so retroreflectivity holds as the surface wears. HUB's certified installers heat-apply it, and it resists aviation fuels, lubricants and de-icers.

It is specified for taxiway markings, hold positions, apron and ramp markings, aircraft parking and tie-down positions, and airside vehicle roadways.

MATERIAL	Preformed thermoplastic
RETROREFLECTIVITY	Glass beads through the full cross-section
INSTALLATION	Heat-applied, bonds to the surface
RESISTS	Aviation fuels, lubricants, de-icers
COLOURS	Five standard: white, yellow, red, black, pink
SURFACES	Non-runway airside pavement

TAXIWAYS · APRONS · HOLD POSITIONS · AIRSIDE ROADS

HOW IT GOES IN

Heat-applied by certified installers

AirMark is preformed thermoplastic with glass beads through its full thickness. A certified installer heat-applies it to the pavement, where it bonds, and as the surface wears new beads keep the marking retroreflective.

ON THE JOB

Airside, from the taxiway to the roadway

Hold position marking

LUNCH & LEARN

A Lunch & Learn on AirMark

Sixty minutes with your engineering, landscape architecture or planning team, in your office or online: the specification, the samples and your questions. Lunch is on us (a $25 voucher when the session is virtual), and nothing is invoiced.
