PREFORMED THERMOPLASTICS

DuraTherm

Inlaid thermoplastic.

Thermoplastic set into a stamped surface. Zero profile above grade.

The asphalt is heated and stamped first; precut 90 mil thermoplastic is set into the impressions and bonded with an infrared heater, so the finished surface sits flush with the road: nothing for a plow blade to catch, nothing to trip on, no shear damage through winter maintenance.

The look of a decorative crosswalk with zero profile above grade, specified for crosswalks, speed tables, traffic calming and identity work where winter maintenance would strip anything that sits on top.

INSTALL	Inlaid into a stamped surface
THERMOPLASTIC	90 mil, precut
PROFILE	Zero, flush with the road
SNOWPLOW SAFE	Yes, no shear risk
BOND	Bonded to the asphalt with an infrared heater

CROSSWALKS · SPEED TABLES · CALMING · IDENTITY

HOW IT GOES IN

Inlaid into a stamped surface

01

Stamp

The asphalt is heated and stamped first.

02

Inlay

Precut 90 mil thermoplastic is set into the impressions.

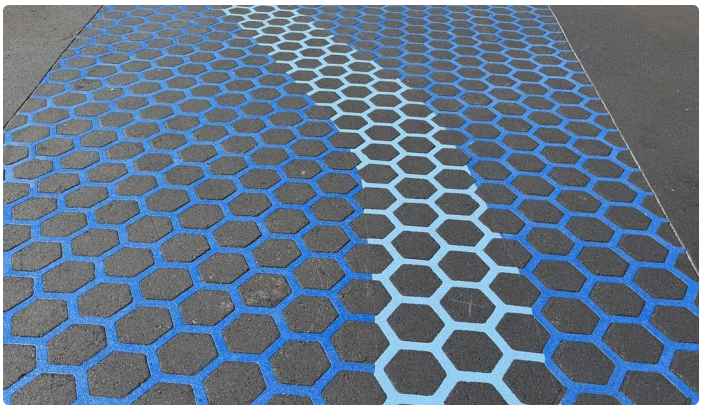

03

Bond

An infrared heater bonds it, and the finished surface sits flush with the road.

LUNCH & LEARN

A Lunch & Learn on DuraTherm

Sixty minutes with your engineering, landscape architecture or planning team, in your office or online: the specification, the samples and your questions. Lunch is on us (a $25 voucher when the session is virtual), and nothing is invoiced.
