

INLAID PAVEMENT MARKING

DuraTherm

Sub-flush inlaid thermoplastic. Built for the snowplow.

Inlaid preformed thermoplastic for crosswalks and streetscape elements where winter maintenance is the deciding factor. A specialized infrared heater softens the asphalt, a template imprints depressions with a 700–900 lb vibratory plate compactor, and precut DuraTherm sheets are placed into the depressions and thermally bonded. The finished marking sits SLIGHTLY BELOW the surrounding asphalt — sub-flush — which is what makes DuraTherm uniquely tolerant of snowplow blades and aggressive winter operations....

THICKNESS

90 mil (2.3 mm) minimum

PROFILE

Sub-flush — below surrounding surface

INSTALL METHOD

Template imprint + vibratory plate

ANTI-SKID (INTERMIX / SURFACE)

≥ 6 Mohs / ≥ 8 Mohs

CROSSWALKS • STREETScape • HERITAGE • CALMING
