

MMA COLOURED LANE TREATMENT

MMA[®]

Two-component MMA + corundum. Traffic-ready in 45 minutes.

A two-component methyl methacrylate resin coating with corundum aggregate (9 Mohs — the hardest anti-skid in the line). Squeegee-, roller-, or spray-applied; cures via BPO catalyst added at install. Traffic-ready in 30–60 minutes — typically 45 — enabling complete overnight installation in active corridors without disrupting weekday transit. EF Green meets FHWA chromaticity coordinates for bike-lane green; Transit Lane Red meets coordinates for bus-lane red. Extended Season variant specifies down to 35°F (2°C) substrate temperature — wider than...

CHEMISTRY

Two-component MMA + corundum (9 Mohs)

CURE TO TRAFFIC

30–60 min (≈ 45 typical)

INSTALL TEMP (EXT. SEASON)

35°F to 150°F (2°C to 66°C)

BUILD THICKNESS

~90 mil (2.3 mm) typical

BUS LANES • BIKE LANES • BRT • TRANSIT
