

STAMPED ASPHALT SYSTEM

StreetPrint

Genuine stamped asphalt. The surface IS the asphalt — flush, no joints.

A true stamped-asphalt system. The asphalt itself is reheated in place with StreetHeat® infrared equipment, imprinted with a wire-rope template and a vibratory plate compactor, then coated with StreetBond150 for colour and protection. There is no paver, no thermoplastic inlay, no joints — the finished surface is the pavement, flush with the surround. More than 50 million square feet installed since 1992. Spec from 100+ template SKUs across 15 pattern families (Offset Brick, Herringbone, Ashlar Slate, British Cobble, Eurofan, custom). Must be installed...

SYSTEM

Imprinted asphalt + StreetBond150 colour coat

IMPRINT DEPTH

≥ 3/8 in — re-stamped if shallower

HEATING CEILING

≤ 325°F (162°C) infrared

HMA THICKNESS

1.5–2 in compacted (recommended)
