

CONCRETE & ASPHALT REPAIR

ChipFill

Hot-applied permanent pothole repair. Year-round, all weather.

A hot-applied surface defect repair material — manufactured by Geveko Markings (Denmark / Sweden) and distributed by HUBSS in Canada. Pre-formed in chip form, laid into the prepared defect, and activated with a propane heat torch. Conforms to the defect contour and bonds chemically to the surrounding asphalt or concrete, sealing against the water ingress that drives freeze-thaw failures. Sets in minutes — lane re-opens to traffic same shift. Pair with AggreFill for larger potholes up to ~1 m².

TYPE

Hot-applied preformed repair material

INSTALL

Lay in, activate with propane torch

SUBSTRATE

Asphalt + concrete

WEATHER WINDOW

Year-round, all conditions

POTHoles · CRACKS · JOINTS · UTILITY CUTS
