

INLAID PAVEMENT MARKING

DuraTherm

Inlaid thermoplastic. Sub-flush profile — built for the snowplow.

Inlaid preformed thermoplastic. A specialized infrared heater softens the asphalt, a template imprints depressions into the heated surface, and precut DuraTherm sheets are placed into the depressions and thermally bonded. The thermoplastic sits **SLIGHTLY BELOW** the surrounding asphalt — sub-flush — which is what makes DuraTherm uniquely tolerant of snowplow blades and aggressive winter maintenance. ADA-compliant, ISO 9001 certified.

THICKNESS

90 mil (2.3 mm) minimum

INSTALL METHOD

Template imprint + vibratory plate

ANTI-SKID (INTERMIX/SURFACE)

≥ 6 Mohs / ≥ 8 Mohs

SKID RESISTANCE

≥ 60 BPN per ASTM E303

CROSSWALKS · STREETSCAPE · HERITAGE · CALMING
