

SOLAR-REFLECTIVE COATING

StreetBondSR

LEED-qualifying solar-reflective coating. $SRI \geq 29$.

The solar-reflective version of StreetBond150 — same waterborne epoxy-modified acrylic chemistry, paired with high-SRI pigment colourants that reduce surface temperature and mitigate urban heat island. Engineered for LEED v4 SSc7.1 Heat Island Effect credit. 'Invisible Shade' colourant technology pushes Solar Reflectance above 0.334 without restricting designs to white or light grey.

SRI (LIMESTONE GREY)

65 — far above LEED 29 threshold

SOLAR REFLECTANCE

≥ 0.334 with Invisible Shade

LEED CREDIT

v4 SSc7.1 Heat Island (Non-Roof)

VOC

~ 19 g/L per ASTM D3960-05
