

STAMPED ASPHALT SYSTEM

StreetPrint

Genuine stamped asphalt. The surface IS the asphalt — flush, no joints.

A true stamped-asphalt system. The asphalt itself is reheated in place with StreetHeat® infrared equipment, imprinted with a wire-rope template using a vibratory plate compactor, then coated with StreetBond150 for colour and protection. No separate paver, no thermoplastic inlay, no joints — the finished surface is flush with the surrounding road. More than 50 million square feet installed since 1992. 100+ template SKUs across 15 pattern families.

SYSTEM

Imprinted asphalt + StreetBond150 colour

IMPRINT DEPTH

≥ 3/8 in

HEATING TEMP LIMIT

≤ 325°F (162°C) by infrared

PATTERN LIBRARY

100+ SKUs across 15 families
