

DECORATIVE PAVEMENT MARKING

TrafficPatternsXD

Heavy-duty preformed thermoplastic. Built for the routes that destroy paint.

TrafficPatternsXD is the heavy-duty variant of the TrafficPatterns family — 150-mil preformed thermoplastic with anti-skid elements aggregate-reinforced through the full cross-section. New anti-skid is exposed as the surface wears. Stamped into heated asphalt with a wire-rope template and heat-fused for a permanent chemical bond — not a coating that can peel. Specified by Canadian transit authorities and municipalities for BRT corridors, high-volume intersections, and heavy turning movements.

THICKNESS

150 mil (3.8 mm) minimum

ANTI-SKID

≥ 30% intermix, ≥ 6 Mohs

SKID RESISTANCE

≥ 60 BPN per ASTM E303

STATIC FRICTION

≥ 0.6 wet/dry per ASTM C1028

CROSSWALKS · BRT CORRIDORS · BUS LANES · INTERSECTIONS
