ESTABLISHED 1994 · COAST TO
COAST

The people who made your city look like your city.

For thirty years, HUB Surface Systems has connected Canadian communities with pavement technologies that do more than carry traffic. Decorative crosswalks. Civic plazas. Indigenous recognition art. Transit lanes. Parks. Driveways. Surfaces that carry meaning.

WHY HUB

The durable decorative hardscape.

Specified by engineers. Loved by communities.

30+

YEARS

Installations across Canada, coast to coast

1,000+

PROJECTS

Completed coast to coast

10

PROVINCES

Specified coast to coast

20yr

PERFORMANCE

Colour retention on stamped asphalt

FOUR REASONS

If it goes on the street, it stays on the street.

0 1

Built for freeze-thaw climates

Stress-tested for de-icing salts, snowplow blades, and the cycles that destroy paint.

0 2

Lower lifecycle cost than paint

Thermoplastic and MMA last 6 to 8 times longer than paint — with no annual repaint window.

0 3

Visible in every condition

High-contrast decorative thermoplastic. Retroreflective regulatory markings where required. Slip-resistant by design.

0 4

Specified coast to coast

Trusted by transportation engineers, urban designers, and municipal procurement from Vancouver to Halifax.

PERFORMANCE

Colour retention on stamped asphalt

SPECIFIED COAST TO COAST SINCE 1994

POSITION

Asphalt is the canvas. The city is the gallery.

Every crosswalk we install is a small public artwork. Every BRT lane, a piece of civic identity. Every Indigenous medallion, a recognition that streets carry meaning long after the paint fades.

THE WORK

From every intersection, a statement.

SECTION ONE

Products.

• TRAFFICPATTERNSXD

When the surface has to hold.

TrafficPatternsXD

Heavy-duty thermoplastic.

150-mil aggregate-reinforced. Built for BRT corridors and high-volume intersections.

TrafficPatternsXD is HUB's heaviest thermoplastic — 150-mil preformed material with performance aggregate reinforced through the full cross-section. Delivers exceptional skid resistance under wet-surface bus traffic, turning movements, and concentrated wheel loads where painted markings and lighter thermoplastics fail. Heat-fused permanently to asphalt or concrete. Specified by Canadian transit authorities and municipalities coast to coast for BRT corridors, high-volume crosswalks, and bus stop pads.

THICKNESS

150 mil

AGGREGATE

Bound through full cross-section

SKID RESISTANCE

60 BPN — ASTM E303

SERVICE LIFE

Multi-year — outlasts paint

• TRAFFIC PATTERNS

Outlasts paint by seasons, not months.

TrafficPatterns

Standard thermoplastic.

125-mil preformed. Heat-fused. No repaint cycle.

Factory-manufactured preformed thermoplastic at 125mil — heat-fused to asphalt or concrete with anti-skid aggregate (Mohs 8, 60 BPN) intermixed through the full cross-section. Holds high-contrast colour through snowplow cycles and de-icing salt seasons where paint requires annual reapplication. Customizable designs and colours let planners embed community character and identity into the crosswalk itself. Open to traffic within hours of installation.

SERVICE LIFE

Multi-year — outlasts paint

• STREETBOND

Coloured pavement that moves with asphalt.

StreetBond

The colour system.

Flexible acrylic engineered to resist peeling, cracking, and fading.

Flexible acrylic engineered to move with the pavement — resisting the cracking from excessive hardness, premature wear from excessive flexibility, and slipperiness from overly smooth surfaces that compromise inferior coatings. Available in a curated standard palette plus full custom Pantone matching. 30–50 sq ft per gallon.

TYPE

Flexible acrylic

COLOUR

Full Pantone matching

SURFACES

Asphalt and concrete

COVERAGE

30–50 sq ft / gallon

• STREETPRINT

Stamped asphalt at a fraction of stone's lifecycle cost.

Stamped asphalt.

12+ patterns. Flush surface. Snowplow safe.

In-place stamped asphalt that impresses brick, cobblestone, slate, herringbone, and fan patterns directly into new or existing asphalt — sealed with StreetBond UV-stable colour. The finished surface is flush with the road: no raised edges, no shear risk under snowplows, no joints to weed. 12+ standard patterns plus fully custom designs. The visual richness of traditional stone without the maintenance.

SYSTEM

In-place stamping + StreetBond coating

SNOWPLOW SAFE

Yes — flush surface

PATTERNS

BASE

New lay or existing asphalt

• DECOMARK

A crosswalk is a canvas.

DecoMark

Custom graphics.

Pride crosswalks. Indigenous art. Civic landmarks at street scale.

A crosswalk is a canvas. DecoMark is how you paint it permanently. Precision preformed thermoplastic, fabricated to your vector artwork and Pantone colour, heat-fused to the road. Pride crosswalks. Indigenous cultural recognition art. Neighbourhood identity installations. Mural-scale public art that lets the street tell a community's story.

INSTALL

Certified crews

• MMAX

Traffic-ready overnight. Engineered for transit lanes.

MMA

MMA resin lane coating.

Methyl methacrylate. 45–60 min cure. Applies at +3°C and rising.

MMA resin that cures to traffic-ready in 45–60 minutes, enabling complete overnight installation in active transit corridors without disrupting weekday operations. Embedded aggregates deliver superior traction under wet conditions. UV-stable pigments resist seasonal fading. Applies at +3°C and rising. The specification for red bus lanes, protected bike lanes, and BRT station zones where cure window and durability outlast painted and acrylic alternatives.

MATERIAL

Methyl methacrylate (MMA) resin

CURE

• STREETBONDSR

Solar reflective. LEED-aligned.

StreetBondSR

Cool surface coating.

Initial SRI ≥ 0.33 . LEED v4 SS Credit: Heat Island Reduction.

Solar reflective acrylic coating with Initial Solar Reflectance ≥ 0.33 — meeting the LEED v4 SS Credit: Heat Island Reduction threshold for non-roof hardscape. Same flexible chemistry and adhesion characteristics as StreetBond. Reduces pavement surface temperatures, mitigates urban heat island, and supports climate action plan implementation. Available in a curated palette of SRI-optimized tones plus custom Pantone matching.

COVERAGE

30–50 sq ft / gallon

• DURATHERM

Inlaid. Flush. Invisible to snowplows.

DuraTherm

Inlaid thermoplastic.

Embedded into a milled groove. Zero profile above grade.

Preformed thermoplastic inlaid into a milled groove in the asphalt so the finished surface sits flush with the road — zero raised edges, zero profile for plow blades, no shear risk through Canadian winter maintenance cycles. No trip hazard. Combines decorative visual richness with skid-resistant surface treatment. The specification for markings that must survive heavy snow clearing without seasonal damage.

INSTALL

Inlaid into milled groove

SNOWPLOW SAFE

Yes — no shear risk

PROFILE

Zero — flush with road

BOND

Heat-fused to asphalt substrate

• DURASHIELD

Maintain a surface, do not replace it.

DuraShield

Pavement maintenance coating.

Two-component epoxy-modified acrylic. Solar Reflectance 0.34.

Two-component waterborne epoxy-modified acrylic coating for asphalt maintenance in pedestrian areas and residential roadways. Solar Reflectance 0.34 — cools the pavement surface and protects the substrate from UV, chemical, and heat degradation. Chemical-resistant: fuel, oil, and deicing agents. Available with anti-slip aggregate. Low VOC.

• PREMARK

Pre-cut. Heat-applied. Open immediately.

Road marking symbols.

Arrows. Stop bars. Legends. Bike pictographs. No stencils.

Preformed thermoplastic symbols pre-cut to specification: turn arrows, stop bars, yield triangles, school zone legends, bicycle pictographs, accessible parking symbols, and crosswalk ladder lines. 125mil standard. Heat-applied via propane torch — open to traffic immediately, no curing window, no stencils. Intersection-grade glass bead retroreflectivity outlasts painted markings by seasons without annual reapplication.

SERVICE LIFE

Multi-year municipal use

• AIRMARK

Airfield markings, certified to last.

AirMark

Airfield thermoplastic.

Preformed. Heat-applied. Engineered to airfield marking standards.

Airfield markings are safety-critical. Precision, visibility, and permanence are not negotiable. AirMark preformed thermoplastic is engineered to airfield marking standards, delivering consistent dimensional accuracy, premium retroreflectivity through full-depth glass bead construction, and a service life that outlasts paint by four to one. Heat-applied by certified crews to asphalt and concrete airfield surfaces. The choice for airports and aerodrome operators who need markings that hold their specification year-round.

APPLICATION

Non-runway airfield surfaces

U ROYAUME

IN THE FIELD

Designed for the city. Built for the street.

• SECTION TWO

Applications.

• CROSSWALKS

Pedestrian safety, designed in.

TrafficPatterns and TrafficPatternsXD thermoplastic hold ASTM-rated skid resistance and high-contrast colour through snowplow cycles and de-icing seasons where paint fails within a year. DecoMark and StreetBond open the intersection as a canvas — Pride crossings, Indigenous cultural art, neighbourhood identity. Specified by municipalities from Halifax to Vancouver.

• BIKE LANES

Visibility that holds, season after season.

A faded bike lane is a dangerous bike lane. StreetBond UV-stable acrylic and MMAX MMA resin maintain vivid colour through years of traffic and weather without chalking or fading. Bond strength above 3 MPa for cured MMAX zones.

• BUS LANES

Engineered for the harshest urban loads.

BRT corridors are among the most demanding surfaces in any city's network. MMAX MMA resin cures to traffic-ready in 45–60 minutes, enabling complete overnight installation without disrupting weekday service. TrafficPatternsXD aggregate-reinforced thermoplastic delivers high skid resistance at bus stops and turning movements. Both outlast painted markings season after season.

HUBSS.COM

• PARKING LOTS

Looks maintained, performs safely, costs less.

Parking lots take a disproportionate beating. DuraShield asphalt maintenance coating (SR 0.34) protects oxidized surfaces from UV, heat, and chemical degradation. PreMark retroreflective and TrafficPatterns high-contrast thermoplastic stall markings hold up without annual repainting. StreetBond creates branded wayfinding zones and fire lane designations.

• PARKS & PATHS

Surfaces worth spending time on.

The path through a park sets the tone for the whole space. StreetBond applies vivid UV-stable colour to existing surfaces. DecoMark brings mural-quality custom graphics. StreetPrint gives plazas the visual richness of stone.

• PLAYGROUNDS

Vibrant, slip-resistant, built for hard use.

Children are hard on surfaces. DecoMark thermoplastic brings hopscotch courts, number grids, compass roses, and mural-scale artwork to play surfaces with Pantone-accurate colour and flush-surface edges that eliminate trip hazards.

• COMMUNITY BRANDING

Neighbourhood identity, embedded in the street.

Every neighbourhood has a story. Most go untold on the street. DecoMark embeds Pantone-accurate custom graphics directly into asphalt: First Nations cultural artwork, BIA wayfinding, neighbourhood crests, Pride declarations, heritage commemorations.

• PRIVATE DRIVEWAYS

Stone-paver looks. No demolition required.

StreetPrint offers in-place stamped asphalt that works with the driveway already there, impressing cobblestone, brick, herringbone, or slate patterns directly into the surface, then sealing it with StreetBond colour.

• SPORT COURTS

Court colour and lines that hold their geometry.

Sport courts are one of the most demanding colour environments in outdoor pavement. StreetBond bonds permanently to asphalt and acid-etched concrete, delivering vivid colours and crisp line markings that hold through hard play.

• SPLASH PADS

Slip-resistant. Cool to touch. Vivid colour.

Splash pad surfaces are uniquely demanding: constant water exposure, chemical treatments, bare feet. StreetBond builds a slip-resistant texture meeting wet-surface safety standards while delivering vivid, engaging colour.

• PUBLIC SPACES

Civic plazas, transit forecourts, university campuses.

Public plazas and civic squares are the most visible surfaces in any community. StreetPrint stamped asphalt transforms grey paved plazas into rich hardscape environments. StreetBond defines civic zones. Installed at UBC, BC Children's Hospital, and civic plazas coast to coast.

• COMMERCIAL SPACES

Premium hardscape. Mixed-use developments and hospitality.

Retail centres, mixed-use developments, hotel porte-cochères. The surface underfoot signals the quality of everything inside. StreetPrint delivers the visual weight of premium stone paving at a fraction of full installation cost.

• TOWNHOMES

Cohesive hardscape for strata developments.

Townhome and strata developments live and die by their first impression. StreetPrint stamped asphalt driveways and entry courts deliver the look of clay pavers or stone cobble at a fraction of the cost — no settling, no weeding.

• PEDESTRIAN SAFETY

Vision Zero, on the surface.

Pedestrian safety isn't aesthetic aspiration — it's a measurable outcome. Retroreflective regulatory markings. High-contrast decorative thermoplastic that persists through de-icing salt cycles. The complete specification for engineers taking Vision Zero seriously.

• TRAFFIC CALMING

Drivers slow without barriers.

Colour changes driver behaviour. Gateway treatments, speed table surface markings, and intersection colour reduce vehicle entry speeds without requiring physical barriers that impede emergency response.

• LEED & HEAT ISLAND

Solar reflective. Climate-aligned.

Standard dark asphalt absorbs most solar radiation. StreetBondSR — Initial Solar Reflectance ≥ 0.33 — meets the LEED v4 SS Credit: Heat Island Reduction threshold for non-roof hardscape. Reduces surface temperatures and mitigates urban heat island. The specification for LEED-certified developments and climate action plan commitments.

• PUBLIC ART

The street as canvas.

The street is one of the largest untapped canvases in any city. HUB public art installations turn that canvas into permanent, weather-resistant community expression. From BC Children's Hospital labyrinth to UBC Indigenous cultural crosswalks.

Paint fades. Memory shouldn't.

KITCHENER, ONTARIO

DECOMARK

• DECOMARK

Kitchener Veterans Memorial

KITCHENER, ONTARIO DECOMARK

Kitchener's Veterans Crosswalk: a permanent civic tribute walked over every day. DecoMark thermoplastic graphic embedded into the street — durable enough to outlast the paint that failed before it, respectful enough to honour what it commemorates.

• EVERY CHILD MATTERS

Honouring residential schools survivors.

TOWN OF GEORGINA, ONTARIO

TRAFFIC PATTERNS

• TRAFFIC PATTERNS

Every Child Matters

TOWN OF GEORGINA, ONTARIO TRAFFIC PATTERNS

Town of Georgina honours the Every Child Matters movement with a permanent TrafficPatterns thermoplastic crosswalk. A civic acknowledgement cast in durable material — walked over every day, visible every season.

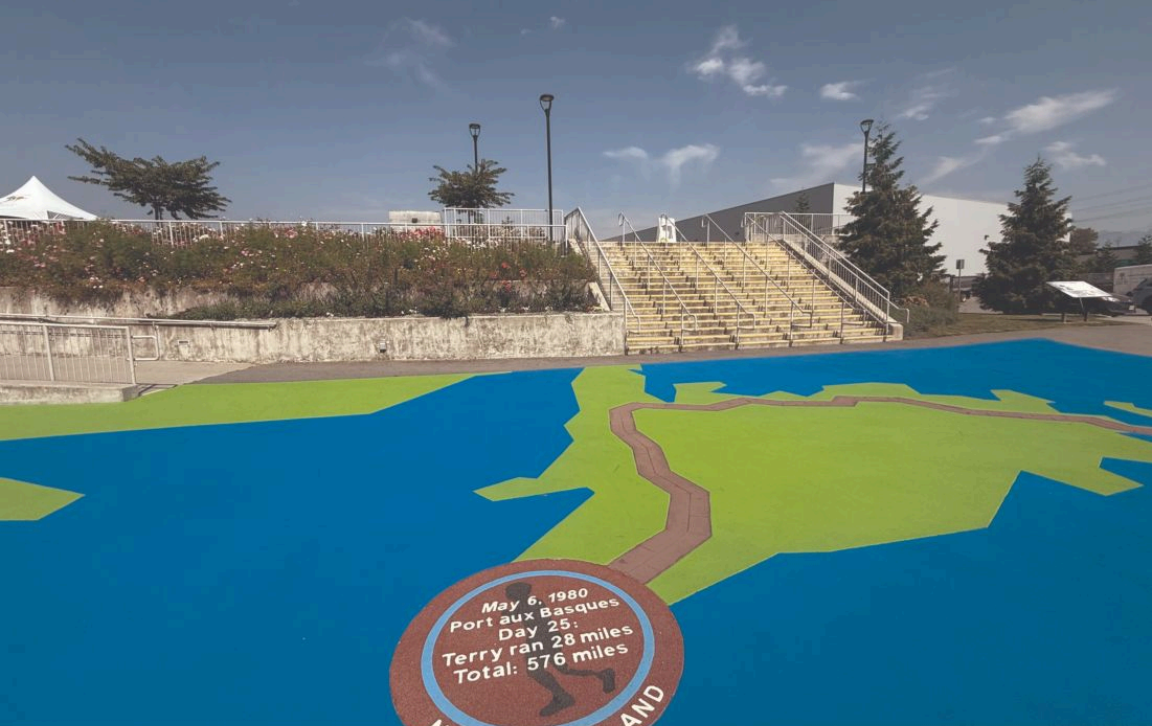

• SECHELT PICTOGRAPH CROSSWALK

The origin story of the shishalh Nation.

SUNSHINE COAST, BRITISH
COLUMBIA

TRAFFIC PATTERNS

• TRAFFICPATTERNS

Sechelt Pictograph Crosswalk

SUNSHINE COAST, BRITISH COLUMBIA TRAFFICPATTERNS

Indigenous artists Dionne Paul and Lindsey Kyoko Adams told the origin story of the shishalh Nation in TrafficPatterns thermoplastic at Cowrie and Trail in Sechelt. Unveiled during National Aboriginal History Month — cultural memory made permanent at street level.

• SIMCOE RAINBOW CROSSWALK

Two years of fundraising. One street.

SIMCOE, ONTARIO

TRAFFICPATTERNSXD

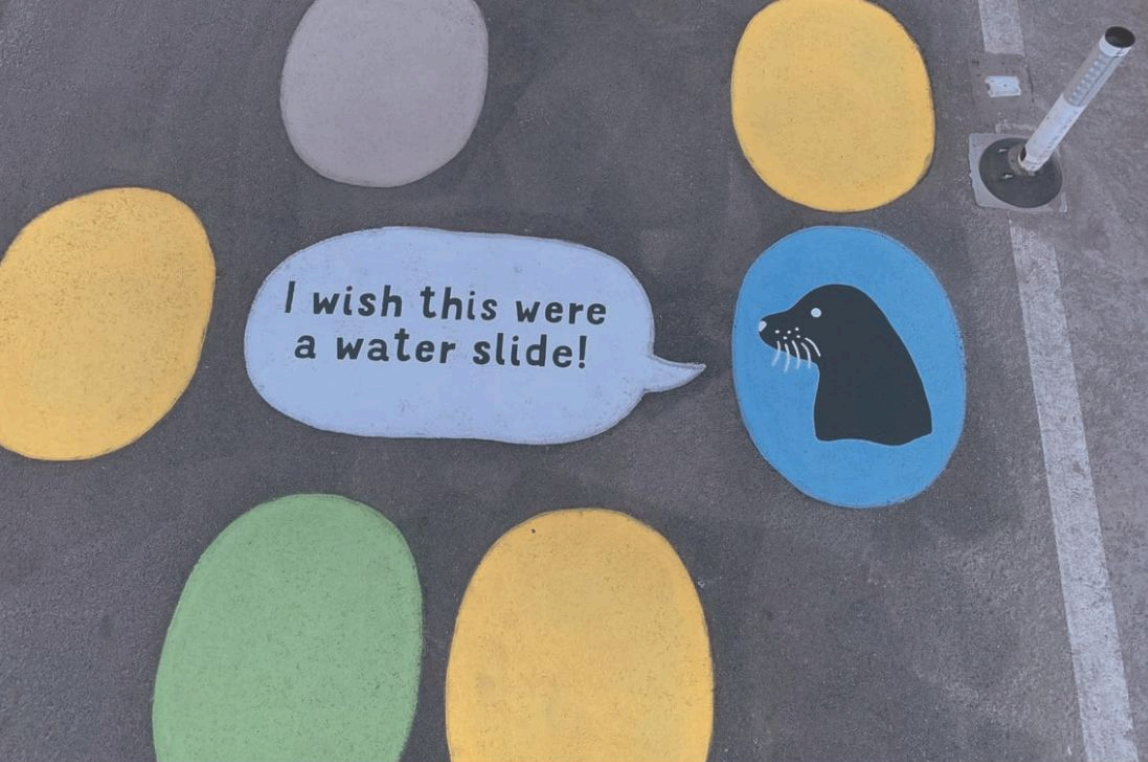

• TRAFFICPATTERNSXD

Simcoe Rainbow Crosswalk

SIMCOE, ONTARIO TRAFFICPATTERNSXD

A young Simcoe resident's two-year fundraising campaign, realized in TrafficPatternsXD by Multiseal. A rainbow crosswalk that holds colour and skid resistance season after season — long after painted alternatives would have faded from memory.

• BOWEN ISLAND PATH

Forest. Sunset. Water. Earth.

SNUG COVE, BRITISH COLUMBIA

STREETBOND

• STREETBOND

Bowen Island Path

SNUG COVE, BRITISH COLUMBIA STREETBOND

A community art path at Snug Cove, Bowen Island. Custom StreetBond in four colours — forest, sunset, water, and earth — community identity built permanently into the surface of the path that connects the village to the waterfront.

• MURRAYVILLE SCHOOLHOUSE

A schoolhouse, a sidewalk, a memory.

LANGLEY, BRITISH COLUMBIA

STREETPRINT

• STREETPRINT

Murrayville Schoolhouse

LANGLEY, BRITISH COLUMBIA STREETPRINT

StreetPrint stamped-asphalt sidewalk linking the historic Murrayville Schoolhouse to the community around it. Heritage-look surface for a heritage building — brick-pattern asphalt that reads as stone and performs as pavement.

• WHITE ROCK SEASIDE STROLL

The waterfront, brought inland.

WHITE ROCK, BRITISH COLUMBIA

TRAFFIC PATTERNS

• TRAFFIC PATTERNS

White Rock Seaside Stroll

WHITE ROCK, BRITISH COLUMBIA TRAFFIC PATTERNS

White Rock commissioned Vancouver artist Amy Bao to carry the coastal identity of the waterfront into the Uptown district on Johnston Road. Her 'Seaside Stroll' — flowing wave lines in the tones of White Rock's sandy beaches — was realized in TrafficPatterns preformed thermoplastic. Permanent. UV-stable. Slip-resistant. In its first season, Uptown reported 40% more foot traffic to the district.

• LANGLEY RAILROAD HERITAGE

Heritage cast in thermoplastic.

LANGLEY CITY, BRITISH COLUMBIA

TRAFFIC PATTERNS

• TRAFFIC PATTERNS

Langley Railroad Heritage

LANGLEY CITY, BRITISH COLUMBIA TRAFFIC PATTERNS

Langley City's crosswalk at the entrance to Linwood Park connects modern pedestrian infrastructure to the city's railway history. Railroad tie-and-rail pattern in preformed TrafficPatterns thermoplastic — tan panels mimicking wooden rail ties, white lines suggesting steel rails, fused permanently to the asphalt. Installed by Square One Paving, March 2025. A social media landmark before the crew had packed up.
