

DECORATIVE PAVEMENT MARKING

TrafficPatternsXD

150-mil preformed thermoplastic. Heat-fused — won't peel under bus traffic.

The heavy-duty member of the TrafficPatterns family. Two-foot-square sheets of 150-mil preformed thermoplastic are heated and stamped into prepared asphalt with a wire-rope template, producing a brick-pattern decorative surface that becomes part of the pavement structure — not a coating that can peel. Anti-skid aggregate (6 Mohs minimum, 30% intermix) is reinforced through the full cross-section, so the friction surface refreshes as the marking wears. Specify XD when a standard 125-mil thermoplastic won't survive the...

THICKNESS

150 mil (3.8 mm) min — heaviest in line

ANTI-SKID

≥ 6 Mohs aggregate, ≥ 30% intermix

SKID RESISTANCE

≥ 60 BPN (ASTM E303)

STATIC FRICTION

≥ 0.6 wet & dry (ASTM C1028 / D2047)
