

CONCRETE AND ASPHALT REPAIR

ChipFill

Heat-activated preformed material for permanent pothole repair. Year-round, all-weather.

ChipFill is a heat-activated preformed pothole repair material engineered for permanent restoration of road surface damage. The material is laid into the prepared excavation and activated with a propane heat torch — no specialized equipment, no hot-mix plant, no aggregate batching. Once heated, ChipFill conforms to the contours of the damage and bonds chemically to the surrounding asphalt or concrete, sealing the substrate from the water intrusion that accelerates...

TYPE	APPLICATION
Heat-activated preformed material	Heat torch — no specialized equipment
SUBSTRATE	WEATHER
Asphalt and concrete	Year-round, all-conditions
